

Valérie Gabelica studied Chemistry and obtained her PhD in Sciences in 2002 at the University of Liège. After a postdoc in Frankfurt as Humboldt fellow, she rejoined the Mass Spectrometry Laboratory in Liège where she obtained a permanent position as FNRS research associate in October 2005. She joined the IECB in 2013 with the support of an Atip-Avenir grant, and became an Inserm research director (DR2) in December 2013. She obtained an ERC Consolidator grant in 2014. Her main research interests are fundamental and advanced aspects of mass spectrometry and its application to non-covalent complexes in general and nucleic acid complexes in particular, with research themes spanning from physical chemistry to biophysics and structural chemistry.
